

TESTED & APPROVED

The international certification body and ship classification society DNV GL Group has tested a substantial part of the range of replacement filter elements in the SFK series (i.e. screw-in and plug-in filter elements in stainless steel or plastic design), which are used in single, double and automatic filters.

This was recently confirmed by issuing a so-called Type Examination Certificate which approved the suitability of the filter elements for use in the marine and offshore industry in accordance with the strict guidelines of the authority.

The approval covers the use with industrial liquids such as hydraulic and lubrication oils, heavy fuels, water, chemicals and coolants. 

Request a free copy of the approval for your records at

www.stauff.com/en/dnvgi

or contact your local sales office for information on our range of filter elements, filter housings and portable filtration units.
